

New Zealand (NZ) Biofouling and Ballast Water Declaration: Part 3

Vessel Name:		Voyage Number:	
All vessels intending to discharge ballast water or with contingency tanks for possible discharge in NZ territorial waters must complete this part. All ballast water tank volumes must be recorded in m ³ . (For more information see the NZ Import Health Standard for Ballast Water from all Countries).			
How will you comply with NZ's ballast water requirements? Check the box(es) indicating the ballast water management option used.			
<input type="checkbox"/> FW Discharging fresh water	<input type="checkbox"/> TS Treating ballast water using an MPI-approved shipboard system	<input type="checkbox"/> E/R or F/T Exchanging the ballast water at mid-ocean (at least 200 NM from the nearest land and in water of over 200m in depth) by Empty/Refill (E/R) (with an efficiency of 95% volumetric exchange) or Flow-Through (F/T) (at least three times the maximum tank capacity).	
Treatment system:		Maximum combined pump capacity (all ballast water pumps): m³/hr	
Exemption applied for <input type="checkbox"/> If you were unable to complete the mid-ocean exchange because it would have caused unacceptable risk to the crew or vessel due to adverse conditions you will need to complete details in the following table identifying the tanks and source of the ballast water for all tanks that the exemption is applied for. Specific details of why the exemption is required:			

TANKS Use tank codes listed below		BW SOURCE Prior to mid-ocean exchange or treatment OR source of FW ballast OR "Empty tank".			MANAGE- MENT METHOD	E/R TANKS & REFILL of Empty	F/T TANKS	MID-OCEAN FLOW-THROUGH EXCHANGE (F/T) or REFILL (R) *For E/R or filling empty tanks, only record REFILL (R) detail*
