

for MITSUI—MAN B&W engines, Calibration interval of the PMI Offline sensor		No.104	
		APPROVED	H.Sakamoto
		CHECKED	Y.Ishida
		PREPARED	T.Yahagi
ENGINE TYPE	All (with PMI Offline sensor)	DATE	2019.11.26

We would like to announce the calibration interval of the PMI Offline sensor which is essential to measure Pmax, Pcomp, Pi, etc, in order to monitor the main engine condition.
(for the PMI Auto-tuning, please refer to TN091.)

Sensor type		Calibration interval	Procedure
PMI offline sensor	Portable sensor	Every 12 months	Calibrate on shore (by maker)
	Calibration Box	Every 5 years	Portable sensor and Calibration Box to be sent together to Maker for calibration

- Portable sensor : for the PMI Auto-tuning reference sensor = every 24 months
(Please refer to TN091.)

Portable sensor

Calibration Box

For any inquiries please contact your regional sales representative by referring to Service Note No. 111.
